1 Overview

This Data Dictionary is intended to be used with all PACE-HD dataset releases, including public datasets (PDS) and internal researcher datasets.

This document denotes variable information, including availability of the data release type in different types of datasets. There is also a brief overview of the constituent data sources, dataset structure, variable structure, and representation of special values.

2 Structure of the Dataset

2.1 Data Sources and Representation within the Dataset

PACE-HD was a longitudinal observational study of physical activity and physical fitness in more than 100 participants with early-mid stage HD (assessed as having an overall low risk) with an additional nested evaluation of a 12-month physical activity intervention compared to usual activity.

The recruitment for the longitudinal study and the nested RCT was conducted over a period of 15 months, both with a 12-month follow up period to either participants on the observational cohort and the nested RCT.

This study also includes variables extracted from Enroll-HD visits. The studies have been collected by different sponsors.

Study acronym	Study name	Sponsor
ENR	Enroll-HD	CHDI
PACE	PACE-HD	Cardiff Univeristy

2.2 Data Files within the Dataset

PACE-HD PDS releases are comprised of 4 data files, each of which fall into one of three categories:

Participant-based: *profile*

These contain general study-independent information about the participant. This information is applicable to all studies.

Study-based: *participation*

These contain study specific information about a participant within a study.

Visit-based: *assessment, visits*

These contain all visit-dependent information for the study, combined into one data file.

Each PDS data file is described in Table 1.

Table 1 PACE-HD dataset release data file descriptions.

Data file	Type	Studies	Description
Profile	<i>participant</i>	PACE	General and participant related data. This includes: sex, allocation group and CAG.
participation	<i>study</i>	PACE	Provides study specific information about study participation. Includes participant identifier, participant status, study start day, study end day.
assessment	<i>Visit</i>	PACE	Visit-specific information about which assessments were performed at each visit (per study).
visits	<i>Visit</i>	PACE ENR	Includes data from the PACE-HD study and specific scales used on Enroll-HD study.

2.3 PACE-HD Study Visit Schedules

2.4 Structure of Variables

This Data Dictionary lists all variables with the appropriate attributes specified in Table 3.

Table 3. Data dictionary column fields.

Attribute	Description
Label	Variable label.
Domain	Correspondent domain (optional).
Category	Additional information about the category of the variable (optional).
Variable	Internal variable name.
Type	<p><i>Boolean</i>: Represents the values 1 (yes) and 0 (no).</p> <p><i>Number</i>: Represents integer or floating-point data values.</p> <p><i>Text</i>: Represents alphanumeric string data values.</p> <p><i>Date</i>: The date type is represented as the number of days relative to the date of the participant's PACE-HD baseline visit date. Note that dates that have been specified in the original data as "incomplete" (e.g. without entry of a day) have been automatically completed by the following rule: use "15" as day if day is missing and use "1" as day and "7" as month if day and month is missing. After this completion the date modification is complete, the number of days relating to the enrollment date is calculated and provided in the dataset. The information about whether a date has been automatically completed is not included in the PDS but can be obtained via SPS request.</p> <p><i>Single choice</i>: Variable with assigned list of options where one item can be selected. The value provided in the dataset is taken from the available options list. The list of options is defined as parameters in the data dictionary tables.</p> <p><i>Multiple choice</i>: Variable with assigned coding list of options where more than one item can be selected. The list of options is defined as parameters in the data dictionary tables.</p> <p><i>Time</i>: Represents the time taken to perform an action.</p>
Coding & Parameter	Parameter value of coded variables (optional).
Units	Unit of input field (optional).
Description	Further information about the variable, like formulas used to calculate the values, and references to papers with more details about the variable.
Transformation	One important objective of the periodic dataset is to de-identify the PACE-HD data in order to minimize the possibility to identify a participant. Therefore, many variables are transformed, recoded or outliers removed/cut. These transformations are described on a variable basis.
Availability	All variables in the PACE-HD dataset are listed in the Data Dictionary. This availability column allows the researcher to identify which variables are available in the PDS ("PDS"), which are available via special request ("Available upon SRC approval"), and which are restricted ("Not Available").

2.5 Representation of Special Values

Date Values

Transformation of date values

To minimize participant identification risk, the PACE-HD PDS does not contain date values. Date values referring to visit dates are transformed to a numeric value, reflective of the number of days between the PACE-HD baseline visit date and the date of interest.

Note that date values are negative, if the date refers to a point in time before the baseline PACE-HD visit.

For example, date values for a participant with a baseline visit date of 01/11/2020 (DD/MM/YYYY) would read as follows:

Entered date	Representation in dataset
01/11/2020	0
30/11/2020	29
31/10/2020	-1

Missing Values

There are two overarching categories of missing data in the dataset: system-defined missing data (indicated by blank variable 'entries'), and user-defined missing data (indicated by specific codes, which indicate reason for missingness).

System defined missing data occurs where the system dictates a missing variable field. These missing data values are indicated by **blank entries** in the dataset.

User defined missing data occur where a mandatory variable field, as determined by the system, is **not completed**, or where the value entered into the system is **incorrect**. In these instances, data entry users are prompted to indicate why the value is missing, or why the value entered is not correct. These user-defined labels - 'exceptional values' – are listed below. Each is represented in the dataset by a **specific code**:

- **Unknown** (entered by the site, only available for specific fields): 9999 (numeric); UNKNOWN (text)

Refers to mandatory values which are **occasionally unknown**. This exceptional value code may be selected as a response to the question, "Is/was your Mother affected by HD? (response: yes/no/unknown)", where a participant did not know their mother.

- **Missing** (value expected, but not entered): 9998 (numeric); MISSING (text); 9998-09-09 (date)

Refers to mandatory values which could not be completed because **data collection was not performed**. This code may be used if a participant refuses to provide a response, if the collection of data was accidentally omitted, or if a value could not be obtained because required instrumentation was not available.

- **Wrong** (value was entered, but declared as wrong by the site. Entered value excluded from dataset): 9996 (numeric); WRONG (text); 9996-09-09 (date)

Refers to mandatory values which are entered into the system and then identified **to be wrong or highly questionable**. This may be because data were collected by the wrong person (e.g., assessment performed by untrained site member), faulty instrumentation (e.g., uncalibrated weighing scales), etc. Although this data are not technically missing, they are recoded as wrong using the codes indicated above for PDS releases.

2.6 Data Availability

This Data Dictionary details all variables collected in PACE-HD study.

The **public datasets** (PDS), prepared from the PACE-HD database, include *some of the variables* collected. Variables included in the PDS are highlighted in green. The PACE-HD PDS goes through stringent quality control and de-identification procedures prior to release. To this end, certain variables can be transformed, aggregated, or suppressed (excluded) in the PDS to minimize participant identification.

Access to non-transformed, deaggregated, or suppressed data may be obtained via **specified dataset (SPS)** request, pursuant to review and approval by the Enroll-HD Scientific Review Committee (SRC). These variables are highlighted in orange.

Certain variables are restricted, typically due to their highly identifying nature. These variables, highlighted in red, and not available via PDS or SPS request, but are included here for completeness.

Finally, some variables are only of interest for the internal researchers who conducted the study. These variables, highlighted in dark blue, are only available in the researchers dataset and are not available via PDS or SPS request.

The variable column 'Availability' indicates these four classes of variables using the color-coding shown below:

Availability	Meaning
PDS	Included in the PDS.

Available upon SRC approval	Not included in the PDS but available via SPS request contingent on SRC approval.
Not available	Restricted variables which are not available in the PDS or via SPS request.
Internal Researchers version only	Not included in the PDS but available to the study researchers.

2.7. Pace-HD visit packages

PACE-HD is an observational cohort study with a nested randomized control trial (RCT) of a 12-month exercise intervention in HD. All PACE-HD participants are also enrolled in the Enroll-HD study

PACE-HD “visit packages” for all participants –typically - comprise a Baseline and an annual Follow Up (FUP2) PACE-HD visits, that should be conducted, respectively, within ± 6 weeks of each of two consecutive annual Enroll-HD visits. Hereafter these Enroll-HD visits will be designated as associated Enroll-HD visits.

An additional interim PACE-HD visit at 6 months after the Baseline (FUP1) was performed only for participants recruited to the within-cohort RCT.

Physical activity and Fitness data (e.g. Qmotor, Qcog, Predicted VO2 Max, HD Pro-Triad, 6-minute walk test, Physical activity monitoring) and Variable form data (see Data Dictionary for complete variable lists by form) are gathered at the PACE-HD visits and the assessments performed will vary depending whether the participant is enrolled in the nested RCT, and/or the allocated group.

Clinical HD data (Motor, TFC, Function, Cognitive, PBA-s) is collected at the associated Enroll-HD visits.
